AMIT SHARMA

Website, Github, Linkedin

Telephone : (+1) 873-688-7654| **Email**: er.amitsharma.r@gmail.com

PROFILE

- Hands on and talented professional looking for Data Analyst role.
- Strong skills in Python (4 years), SQL (2 years), R, Tableau (1 year). Familiar with PySpark, Hadoop, Databricks, Stream analytics, Azure (HDInsight, Administration), Parquet files.
- Proven ability with machine learning, deep learning, statistical analysis, clustering, anomaly detection. Experienced handling large datasets. 2 years of industry experience.
- Managed 3-member club and coordinated with professors to conduct information session for department. Eager to work in cross-functional team. Willing to relocate.

SKILLS

Data Analysis	SQL , Spark, Python: pandas, matplotlib, spacy, numpy, gensim, scikit-learn (sklearn), Pyspark, pytorch (torch.nn), tensorflow, keras, Hadoop, NLP
Programming	Python, R, Tableau, C, Java, MATLAB, HTML5, CSS, REST API, NoSQL
Framework	Django, Scrapy, Jupyter
Other tools	Datbricks, Git, Azure HDInsight, MS Office

EXPERIENCE

KataniTech (March 2020 - Present) – **Data Scientist, Volunteer**

- Technology: Django, Python, keras, HTML, CSS, Javascript, MongoDB
- Compiled 100,000+ tweets and retweets for the machine learning algorithm and KDD process.
- Analyzed tweets by running keyword extraction after hashtags analysis; found that trends were specific to a brand and text data was incomplete in terms of having a trending entity.
- Selected Django and python as the backend framework, designed architecture of the data collection, organization and ingestion flow for web-app.
- Presented the development of team with founder, created task assignment for team members and documented the ideas and methodology thought of and adopted.

Data for Good (July 2020 - Present) – **Volunteer, Data Analyst in Habitat for Humanity project**

- Compiled 8000+ data points on available units in Ottawa on July 25 from Kijiji using web scraping.
- Analyzed text about Description of unit to automatically infer whether utility like heat, hydro, internet is included in the rent using rule-based n-grams.
- Structured 2000+ new data points every month and forwarded it to housing blitz project client.
- Organized a virtual seminar on web scraping. Demonstrated how I completed kijiji's scraping job and how to collect cooking recipe from web to participants.

University of Ottawa (September 2018 – December 2019)

Project: **Automatic Identification of Inventive Concepts of Patent Documents** (Bell Advanced Research Lab, Ottawa)

Supervisor: Professor Tet Hin Yeap

Duration: May 2019 – December 2019

- Technology/Environment: Python, Google Colaboratory, Jupyter
- Defined the procedure for solving problem. Created data ingestion methods for ML algorithm.

- Used Python's pandas, sklearn, nltk, gensim and spacy for feature engineering and validating the model to decide which algorithm to adopt. Used pyLDAvis for visualizing the topic models.
- Identified top 50 semiconductor businesses and their market competitions while carrying out backward citation analysis of documents.
- Compiled data using web scrapping in Python. Automated web scraping procedure. Web scraping results were polluted due to inconsistent result of search queries.
- Compiled data using xml parser in python. Used USPTO's XML bulk-data and parsed it with xml library with assumption that quadratic blowup would not occur.
- Automated data extraction from xml files of size over 1000MB XML files, using xml library.

Logistics Management Division, DOHS, Kathmandu, Nepal – July 2016 to June 2018

Role: Preventive Maintenance Engineer

- Prepared quarterly cost estimates repairs of 85 vehicles using current market valuation of the parts for The Secretary of Ministry of Health and Directors and Auditors at DOHS.
- Prepared specification and cost estimates of vehicles to be purchased through competitive bidding. Purchased and evaluated 27 trucks, 14 SUVs, 35 Ambulances and 21 motorcycles.
- Completed size requirement analysis, using python, and specification design from scratch for competitive bidding of Refrigeration Truck to transport vaccine.
- Reduced size requirement of van by 57% and cost associated with it by 35.5% using forecasting and previous supply data.

EDUCATION

Master of System Science (Sept 2018 – Dec 2019), *University of Ottawa – Department of Computer Science & Electrical Engineering, Ottawa, CA*

Bachelor of Engineering (Nov 2011 – Oct 2015)**,** *IOE, Tribhuwan University, Lalitpur, Nepal*

Online Courses

6.86x: Machine Learning with Python-From Linear Models to Deep Learning
BMC: Bloomberg Market Concepts
Microeconomics: The Power of Markets by University of Pennsylvania on coursera
Game theory- Advanced Application, a course from Stanford University, on Coursera

ACTIVITIES

Professional Development Club, Founder and Webmaster, University of Ottawa, Ottawa, CA

System Science Graduate Student Association, Founder and President, University of Ottawa, ON, CA
