AMIT SHARMA

Website, Github, Linkedin

Telephone : (+1) 873-688-7654| **Email**: er.amitsharma.r@gmail.com

PROFILE

- Hands on and talented professional looking for Data Analyst role.
- Strong skills in Python (4 years), SQL (2 years), R, Tableau (1 year), JIRA. Familiar with Apache spark, Hadoop, Databricks, Azure Administration, Parquet files, git, Rest API.
- Proven ability with machine learning, deep learning, statistical analysis, clustering, anomaly detection. Experienced handling large datasets. 2 years of industry experience.
- Excellent communication skills, problem solver, team player, multi-tasking. Eager to work in cross-functional team. Wants to add value to business. Willing to relocate.

SKILLS

Data Analysis	SQL , Spark, Python: pandas, matplotlib, spacy, numpy, gensim, scikit-learn (sklearn), Pyspark, pytorch (torch.nn), tensorflow, keras, Hadoop, NLP
Programming	Python, R, Tableau, C, Java, MATLAB, HTML5, CSS, REST API, NoSQL
Framework	Django, Scrapy, Jupyter
Other tools	Datbricks, Git, Azure HDInsight, MS Office

EXPERIENCE

KataniTech (March 2020 - Present) – **Volunteer Artificial Intelligence and Backend Lead**

- Technology: Django, Python, keras, HTML, CSS, Javascript, MongoDB
- Contributed in the initial stages of data collection for the machine learning algorithm KDD process.
- Selected Django and python as the backend framework, designed architecture of the data collection, organization and ingestion flow for web-app.
- Presented the development of team with founder, created task assignment for team members and documented the ideas and methodology thought of and adopted.

University of Ottawa (September 2018 – December 2019)

Project 1: **Automatic Identification of Inventive Concepts of Patent Documents** (Bell Advanced Research Lab, Ottawa)

Supervisor: Professor Tet Hin Yeap

Duration: May 2019 – December 2019

- Technology/Environment: Python, Google Colaboratory, Jupyter
- Defined the procedure for solving problem. Created data ingestion methods for ML algorithm.
- Used pandas, sklearn, nltk, gensim, spacy and pyldavis for feature engineering and validating the model to decide which algorithm to adopt. Used pyLDAvis for visualizing the topic models.
- Identified major semiconductor businesses and their market competitions while carrying out backward citation analysis of documents.
- Compiled data using web scrapping in Python. Web scraping results were polluted due to inconsistent result of search queries.
- Compiled data using xml parser in python. Used USPTO's XML bulk-data and parsed it with xml library with assumption that quadratic blowup would not occur.
- Automated data extraction from xml files of size over 1000MB XML files, using xml library.

Project 2: **User Privacy in Data Mining**
Duration: September 2019 – December 2019

- Technology/Environment: Python, R
- Synthesized dataset for demonstrating why Anonymization is not a good method and worked on connecting Gaussian and Laplacian distribution for data randomization on query.
- Demonstrated how secure-multiparty computation or, randomization will help preserve privacy while allowing limited inference from a dataset, using the technique of Differential Privacy.

Logistics Management Division, DOHS, Kathmandu, Nepal – July 2016 to June 2018

Role: Preventive Maintenance Engineer
Responsibilities:

- Prepared cost estimates of vehicle repair using current market valuation of the parts for The Secretary of Ministry of Health and Directors and Auditors at Department of Health Services.
- Prepared specification and cost estimates of vehicle to be purchased through competitive bidding.
- Completed size requirement analysis and specification design from scratch for competitive bidding of Refrigeration Truck to transport vaccine.

EDUCATION

Master of System Science (Sept 2018 – Dec 2019), *University of Ottawa – Department of Computer Science & Electrical Engineering, Ottawa, CA*

Bachelor of Engineering (Nov 2011 – Oct 2015)**,** *IOE, Tribhuwan University, Lalitpur, Nepal*

Online Courses
6.86x: Machine Learning with Python-From Linear Models to Deep Learning
BMC: Bloomberg Market Concepts
Microeconomics: The Power of Markets by University of Pennsylvania on coursera
Game theory- Advanced Application, a course from Stanford University, on Coursera

ACTIVITIES

Professional Development Club, Founder and Webmaster, University of Ottawa, Ottawa, CA
System Science Graduate Student Association, Founder and President, University of Ottawa, ON, CA
